

We dedicate ourselves to figure out the best approach to each project. We work with the requests of each client and offer additional ideas to limit cost, structural support, maintenance, or simply design a better installation that will be appreciated years to come.

We provide a 7 year warranty for every Parasoleil panel in its design and structural stability. We recommend that the client's project engineer approve all materials and plans. Our structural guidelines and product recommendations are safely based on experience and field testing, but warranties do not cover the panel finish, fasteners, structural advice, weather liability, or product application. We stand behind Parasoleil lasting for a very long time.

“It's about design that will last; it's about sustainability; it's about the shadows!”

Our Standard Copper Panels are

Green Rated: A

16 oz copper (3x8 ft.) flexible, strong, No maintenance, Toxic chemicals

90+ % recycled material (green-certified)

100% recyclable

Fire & smoke rating: Class A

No VOC, Antimicrobial

USA Made

50 yr plus life span

Natural patina protects the environment

Green Guide:

Use thinnest material possible, Use strong supports

Raw, solid copper (should develop a patina in a year)

Factory-accelerated patinas available, sealed,

For screens in commercial applications or those with residential applications with children we strongly recommend thicker material.
